TOWING YOUR VEHICLE

WARNING: A vehicle driven with a steering wheel equipped with a non-automotive steering column lock is not street legal.

If you need to tow your vehicle, severe damage may occur to the drive train and the rear wheels on the ground or to the rear wheels while being towed.

1. Set the manulal free-wheeling hubs to the "FREE" position.
2. Shift the transmission lever into "2" and release the parking brake.
3. Release the driving wheels.
4. Shift the transmission lever into "P".
5. Turn the ignition key to the "ACC" position.
6. With the engine off, start the engine and recenter the steering wheel.
7. Slowly move the steering wheel to the "FREE" position under the vehicle and check for any signs of veering or unbalanced steering.
8. If you need to tow your vehicle, severe damage may occur to the drive train and the rear wheels on the ground or to the rear wheels while being towed.

WARNING: Do not tow a vehicle with the rear wheels more than 50 miles (80 km) or at a speed over 20 miles (30 mph).
